Release Notes

PocketBook Touch Lux

October, 30 2013

Implemented:

1. New service «*Send-to-PocketBook*» — the ability to send books to your device using the email message with attached file(s), book(s).

2. Optimized work of the «*Library*» application to be able to operate with a large number of books.

3. Improved work with footnotes (links) in EPUB, FB2, PDF documents.

4. The ability to read password-protected PDF documents.

5. Improved Touch panel software.

6. Implemented the ability to change the speed and tone of speech in TTS.

7. New design of «*go to page*» in the reading mode.

8. Selection of the current chapter in the book's contents.

9. Increased speed of opening EPUB books.

10. Added the ability to create a new account in the application «Book Store».

11. Development of the '*Browser*' application.

12. The ability to assign frontlight on/off function and screen brightness function for buttons.

13. Added the ability to edit the RSS feed name.

Fixed:

1. Sometimes events on devices from the touch panel were determined with invalid co-ordinates, or events took place without user touching the screen.

2. Sometimes events of the touch panel at scrolling in the reading mode were ignored.

3. A short flash of frontlight at turning on the device.

4. After locking or turning off the device the frontlight was turned off.

5. Fixed work with profiles after formatting the internal memory.

6. The text position was not saved in DjVu after turning off the device.

7. Sometimes the device hang out during browsing images in the '*Scribble*' application.

8. Book names were not displayed in DjVu, if that value was set in settings of the status bar.
