PocketBook

Release Notes

InkPad Color 2

PocketBook

Firmware: 6.8.3140 (February 26, 2024)

Core changes

1. Added DARKmode, recommended for reading in the dark. When the DARKmode is activated, the letters are displayed light and the background is dark, so that the background of the e-book page does not contrast with the dark surroundings and the eyes are not impaired.

It is possible to enable or disable the inversion of illustrations in the settings («Frontlight & DARKmode»). This option is only available if DARKmode is activated.

2. Implementation of an automatic connection to Bluetooth headphones after the device is turned on, if previously paired headphones are found.

3. Support of the new Dropbox authorization schema.

Reading program

1. When turning into landscape orientation there is now an automatic change of the prev page and next page buttons for flipping pages more conveniently in this orientation.

2. Faster zoom in PDF, DjVu formatted books.

3. Faster handling of the list of notes in the «Content» of the Reading app as well as the Notes Application.

4. Smoother movement of sliders while highlighting text in a book.

5. Fixed the problem that could cause grey frames in some illustrations in books of FB2 format.

6. Fixed a problem that could cause incorrect adjustment of contrast, brightness, and saturation of the page in some PDF format books.

PocketBook

7. Addressed an issue that could have prevented the underlining of text strings while creating notes in some EPUB format books.

8. Resolved the issue of possible inverted illustrations in some books of CBZ format when Dark mode is enabled.

9. Fixed a problem that could cause an unprecise opening of a note from a list of notes, that was created in PocketBook application on iOS and received when synchronizing notes with PB Cloud.

Other improvements

1. ReadRate service has been removed from the firmware due to the change of purpose of this service (now it is an information portal, not a recommendation service).

2. Added functionality of informing the website about the current color scheme, depending on whether Dark mode is enabled or not in the Browser application.

3. Added functionality to invert the current web page when Dark mode is enabled in the Browser application.

4. Fixed an issue that may have caused some third-party dictionaries in .dic format not to work on device.

5. Fixed a problem that could cause an incorrect search in the Library if special characters are present in the search word.

6. Fixed an issue that could cause the absence of Adobe activation in device Settings when activating the device in the ADE application.

7. Fixed an issue that may have caused some ghosting to remain when moving a slider while editing an address bar in the Browser application.

8. Fixed a problem that might have prevented scrolling through the list of pictures in the popup window using hardware buttons while adding pictures to a playlist in the Photo Frame application.

9. Fixed the problem that some books in CBZ format were displayed without covers in Library application.

10. Fixed an issue that displayed the author's name incorrectly in some audiobooks.

11. Some wording improvements.

12. Other minor bugfixes and improvements.

Firmware: 6.8.1550 (June 05, 2023)

- P. 5 -

Other improvements

1. Fixed an issue that may have caused some third-party dictionaries in .dic format not to work on device.

2. Fixed an issue that caused Bluetooth headphones to not automatically reconnect after the device resumed from sleep mode.

3. Fixed a problem where pressing the next page button would cause double page flipping if the device switched to power saving mode while the button was being pressed.

4. Fixed the problem that caused pages to be skipped when using the next page button in PDF-formatted books.

5. Fixed the problem that the Bluetooth buttons of some device types (uHID devices working with the BT LE standard) could not be paired with the device.
